

# Hate fat? Lose it fast!

*Have you ever dreamt of reaching your goal without stressing yourself out searching for the means? Have you ever believed that miracles are real?*

**By Alhashemiya Abusabra**

**H**ave you ever wondered if it was possible to reach your goal and perfect weight with no pain?

You can do this, and we are telling you how.

A new medical invention called ZERONA can achieve this for you. This miracle that will be for you, and only you, this new revolution in body shaping uses low-level laser which proves non-invasive alternative to surgery. It is your

opportunity to live your life in a different way.

ZERONA simply melts Fat without any pain or heat sensation by the application of what is called cold laser, targeting successfully the 9 NO's: NO Diet, NO exercise, NO Pain, NO surgery, NO anesthesia, No recovery period, NO down time, NO Bruising, NO Swelling.

This allows people to continue their daily activities without the interruption from surgery, pain, wounds or garments.

#### **How does it Work?**

ZERONA works by utilizing low level frequency laser, which is characterized by low energy level, to emulsify Adipose tissue. The excess fat is passed through the body during its normal course of

detoxification.

The low level laser is able to emulsify the adipose tissue, in another way, is able to melt the fat that is found in the adipose tissue group of cells that store the fat in the body.

The collapse of the rigid adipose tissue will result in the secretions of triglycerides and fatty acids.

In the response to the cold laser stimulation, in every fat cell or adipose cell there will be a formation of a transitory pore forming in the bi-lipid membrane in an adipose cell.

This will make Triglycerides and fatty acids to move into the interstitial space.

This pore is not damaging to the cell, but simply serves as a means for the fatty contents of the cell to evacuate. The formation of the transitory pore is the product of a series of secondary reactions originating in the mitochondria.

#### **Are there any Side effects?**

The low frequency laser used in

ZERONA is a low level laser with 633 nm wave length, which causes no harm to the tissue or the cells.

This laser light Only affects the fatty cells causing the fat to leave the cells after being melted and then the cells to shrink, which will decrease the triglycerides and the cholesterol levels in the body after being eliminated from the body mainly through stools.

This type of laser with low level energy has tremendous effect on fat cells by melting the fat in these cells without the destruction of the fat cell itself which shows a huge progress in this field of science, and as we all know there are many medical complications associated with excess fat found in the body, such as increasing in the level of cholesterol and triglycerides beside losing the activity of the insulin secreted in the body because of the presence of this excess fat which may lead to diabetes, so getting rid of this excess fat will keep you

away from so many complications related to your health such as diabetes, dyslipidemia, heart disease, breathing problems and joint diseases, and in this way you are improving your quality of life and adding more healthy years to your age.

ZERONA is FDA approved as an assisting liposuction device, officially sponsored by Bader Sultan Company & Bros. being the soul agent in the Middle East in Kuwait, and the leaders in their field.
